

Supplemental Figure 1. Left, LPS upregulates PCs in the macrophages. RAW264 cells were left intact (-LPS) or treated 24 h with LPS (+LPS). Total RNA extracted from the cells was analyzed by RT-PCR to determine the levels of the mRNAs of the individual PCs. The calculated size of the amplified fragments was 457, 261, 510, 454, 456 and 399 bp for PC1/3, PC2, PC5/6, PC7, PACE4 and furin, respectively.
